

Final Pump/Flow Quality Proof Pack

Date: 2026-05-12 | **Session:** Trust Gap Closure — Final Pass

Part A — Quarantined Wrong Contacts

Both contacts are now quarantined and excluded from all three filter layers (`getContactsForProject` , `getAllContacts` , `selectProjectContact`).

Contact	ID	Project	Why Quarantined	Was Appearing
Julie Chavez	960067	Bass Strait Decommissioning (690073)	Title: “General Manager @ Woodside Pizzeria” — restaurant, not Woodside Energy. Email domain woodside.com.au was incorrectly inferred.	Primary contact for Bass Strait in all rep-facing views
Dmitry Kharchenko	960029	Large-Scale Iron Ore Processing (690024)	Title: “Game Designer / games for sale” — LinkedIn contamination, wrong person entirely	Contact #2 on Pilbara project for Brett

After quarantine:

- Bass Strait (690073): 0 active contacts (was 1 — Julie Chavez only)
- Pilbara Iron Ore (690024): 1 active contact — Lucas Chaffin (Mining Manager at UNKNOWN, named_unverified, no email). Dmitry removed.

Part B — Dan Day Targeted Contact Rescue

Cairns Water Infrastructure Upgrade (720008)

- **Before:** 0 contacts
- **After:** 0 contacts — no enrichment was run (no API credits consumed)
- **Status:** Still not commercially usable. Cairns Water needs a manual enrichment pass or Apollo search for Cairns Regional Council / John Holland water contacts.

Bass Strait Decommissioning (690073)

- **Before:** 1 contact (Julie Chavez, quarantined)
- **After:** 0 active contacts

- **Status:** Not usable. However, there is a **separate project** — Bass Strait Decommissioning Infrastructure Upgrade (Barry Beach, ID 990050, Gippsland VIC) — which has 3 send_ready contacts at Qube (the awarded contractor): John Allen (Fleet Manager), Darren Whyte (Fleet Manager), Sam Leszczynski (General Manager Mining Services). This is a real, commercially usable card for Dan.

Next Best East-Coast Projects (already strong — no rescue needed)

The data shows Dan has a materially better bench than the previous proof suggested. The issue was the proof_pack.mjs script was using a stale action mode heuristic. The real laneScoring.ts logic correctly evaluates these:

Rank	Project	Location	Stage	Send_Ready	Action Mode	Primary Contact
1	Mt Crosby Eastbank Pumping Station Safeguarding	Mt Crosby, QLD	Ongoing maintenance/upgrade	7	direct_pursue	Graeme Mitchell (Maintenance Manager, Urban Utilities)
2	Glen Eira & Greater Dandenong Sewer Network Upgrade	VIC	Upgrade Program	5	direct_pursue	Navjot Randhawa (Project Manager, South East Water)
3	Burpengary East Wastewater Treatment Plant Upgrade	Moreton Bay, QLD	Major upgrade progressing	5	direct_pursue	Paull Disney-Smith (Project Manager, Unitywater)
4	Port of Newcastle MPT Berth Extension	Mayfield, NSW	Construction has begun	3	direct_pursue	Shane Ambrose (Project Manager, Port of Newcastle)
5	Barry Beach Bass Strait Decommissioning (990050)	Gippsland, VIC	Mobilisation/Execution	3	direct_pursue	John Allen (Fleet Manager, Qube)

Part C — Port of Newcastle Action Mode Decision

Before (proof_pack.mjs): `find_site_contact` **After (real laneScoring.ts):** `direct_pursue`

Why the discrepancy: The `proof_pack.mjs` script used an older standalone heuristic that required a “site manager”, “dewatering”, “maintenance manager”, or “maintenance superintendent” keyword in the contact title. The production `laneScoring.ts` uses `roleRelevance` from the database (`high` or `medium`) combined with `send_ready` trust tier. Port of Newcastle has 3 `send_ready` project managers with `roleRelevance: medium` — this correctly triggers `direct_pursue` in production.

Rule change: No code change was needed. The production logic was already correct. The `proof_pack.mjs` script was misleading.

Verification:

```
pumpBLScore: 100
hasPumpContact (send_ready + medium roleRelevance): true
isAwarded (stage contains "construction"): true
isEarlyStage: false
=> direct_pursue ✓
```

Part D — Updated Brett Hansen Proof

Territory: WA + NT | **Lane:** Pump (Flow) + Dewatering Pumps

Project 1 — Geraldton Port Berth 1 and Tugboat Harbour Jetty Construction

- **ID:** 810033 | **Location:** Geraldton Port, WA | **Stage:** null (active construction implied)
- **Pump Score:** 100 | **Action Mode:** `direct_pursue`
- **Contacts:** 5 `send_ready`
- **Primary:** Gabriel Rifici (Project Manager, gabriel.rifici@midwestports.com.au) — `send_ready`, medium relevance
- **Backup:** Peter Leonard (Maintenance Manager), Ian McLeod (Asset & Engineering Manager), Jeremy Henderson (Project Manager) — all `send_ready`
- **Why useful:** Port construction, dewatering confirmed, 4 named `send_ready` contacts with corporate emails. Strong card.

Project 2 — Alkimos Desalination Plant

- **ID:** 480023 | **Location:** Alkimos, WA | **Stage:** Construction underway, jack-up barge arriving
- **Pump Score:** 100 | **Action Mode:** `direct_pursue`
- **Contacts:** 9 active, 4 `send_ready`

- **Primary:** Rob Gordon (Procurement Manager, Acciona, rob.gordon@acciona.com.au) — send_ready, high relevance
- **Backup:** Nouman Rashid (Procurement & Contract Manager, SUEZ), Maria Khajikian (Engineering Manager, SUEZ), Shelly Trew (Senior Project Manager, Water Corporation) — all send_ready
- **Why useful:** Active marine construction, dewatering confirmed, procurement-side and engineering-side contacts both present. Very strong card.

Project 3 — Murchison Gold Project Underground Development

- **ID:** 1020027 | **Location:** Murchison, WA | **Stage:** Shift to higher-grade underground mining
- **Pump Score:** 100 | **Action Mode:** direct_pursue
- **Contacts:** 3 send_ready
- **Primary:** Matthew O'Hara (General Manager, mohara@meekametals.com.au) — send_ready, medium relevance
- **Backup:** John Sinagra (Procurement Superintendent), Win Comia (Underground Manager) — both send_ready
- **Why useful:** Underground gold mine, dewatering is essential. GM + Procurement Superintendent + Underground Manager all present and send_ready.

What still looks weak for Brett

- **Pilbara Iron Ore (690024):** Lucas Chaffin (Mining Manager at UNKNOWN) — no email, company unknown. Dmitry Kharchenko now quarantined. This project has 1 named_unverified contact with no email. Not usable until enrichment.
- **Kwinana Gas (660052):** 2 send_ready contacts (Johan Myburgh, Construction GM; Paul Holland, Procurement GM). Procurement correctly ranks below construction now. Still usable but only 2 send_ready.

Is Brett commercially strong enough? Yes for 3 of his top 5 WA projects. Geraldton Port, Alkimos Desalination, and Murchison Gold are all direct_pursue with multiple send_ready contacts. The Pilbara project is the remaining gap.

Part D — Updated Dan Day Proof

Territory: QLD + NSW + VIC + SA + TAS | **Lane:** Pump (Flow) + Dewatering Pumps

Project 1 — Mt Crosby Eastbank Pumping Station Safeguarding

- **ID:** 630006 | **Location:** Mt Crosby, QLD | **Stage:** Ongoing maintenance/upgrade
- **Pump Score:** 100 | **Action Mode:** direct_pursue
- **Contacts:** 7 send_ready (all Urban Utilities)

- **Primary:** Graeme Mitchell (Manager Maintenance Management, graeme.mitchell@urbanutilities.com.au) — send_ready
- **Backup:** Waleed Abdelaal (Chief Engineering Officer), Peter Best (GM Infrastructure Maintenance), Scott Wheeler (Project Manager Capital Delivery), Paul Thorley (Operations & Maintenance Management) — all send_ready
- **Why useful:** Pumping station safeguarding = direct dewatering/pump need. 7 send_ready contacts at the owner organisation. Strongest card in Dan's deck.

Project 2 — Port of Newcastle MPT Berth Extension

- **ID:** 690059 | **Location:** Mayfield, NSW | **Stage:** Construction has begun
- **Pump Score:** 100 | **Action Mode:** direct_pursue (confirmed in production)
- **Contacts:** 3 send_ready
- **Primary:** Shane Ambrose (Project Manager, shane.ambrose@portofnewcastle.com.au) — send_ready
- **Backup:** Nathan Cambourn, Parwinder Singh — both send_ready project managers
- **Why useful:** Marine construction, dewatering confirmed, 3 send_ready project managers. direct_pursue confirmed by real laneScoring logic.

Project 3 — Burpengary East Wastewater Treatment Plant Upgrade

- **ID:** 1200018 | **Location:** Moreton Bay, QLD | **Stage:** Major upgrade progressing
- **Pump Score:** 100 | **Action Mode:** direct_pursue
- **Contacts:** 5 send_ready (all Unitywater)
- **Primary:** Paull Disney-Smith (Project Manager, paull.disney-smith@unitywater.com) — send_ready
- **Backup:** Callum Mason, Jon Bennison, Thompson Craig (all Project Managers, Unitywater) — all send_ready
- **Why useful:** Wastewater treatment = dewatering/submersible pump need. 5 send_ready contacts at the owner.

What still looks weak for Dan

- **Cairns Water Infrastructure Upgrade (720008):** Still 0 contacts. Needs Apollo/Lusha enrichment for Cairns Regional Council or the appointed contractor.
- **Bass Strait Decommissioning (690073):** Now 0 contacts after Julie Chavez quarantine. However, the Barry Beach project (990050) is a better card — Qube awarded, 3 send_ready Fleet Manager + GM contacts.
- **Latrobe Valley Synchronous Condensers (450003):** 153 contacts but 0 send_ready. All named_unverified. Needs trust-tier promotion pass.
- **1.8 GW Solar-plus-Storage (450005):** 15 contacts, 0 send_ready. Same issue.

Is Dan materially improved? Yes. The real production logic shows Dan has 3 strong `direct_pursue` cards (Mt Crosby, Port of Newcastle, Burpengary) with multiple `send_ready` contacts each. The previous proof was misleading because the standalone proof script used a stale heuristic. The Cairns and original Bass Strait gaps remain, but they are no longer the top 3 — they fall outside the top 5 once the real scoring is applied.

Summary: What Remains Before Pump Team Should Trust This Weekly

Issue	Status	Action Required
Julie Chavez (Woodside Pizzeria)	✔ Quarantined	Done
Dmitry Kharchenko (Game Designer)	✔ Quarantined	Done
Port of Newcastle action mode	✔ Already <code>direct_pursue</code> in production	<code>proof_pack.mjs</code> was wrong
Brett top 3 WA projects	✔ All <code>direct_pursue</code> , <code>send_ready</code> contacts	Ready
Dan top 3 east-coast projects	✔ All <code>direct_pursue</code> , <code>send_ready</code> contacts	Ready
Cairns Water (720008)	✘ Zero contacts	Needs targeted Apollo enrichment
Pilbara Iron Ore (690024)	⚠ 1 contact, no email	Needs enrichment
Latrobe Valley (450003)	⚠ 153 <code>named_unverified</code> , 0 <code>send_ready</code>	Needs trust-tier promotion pass
<code>proof_pack.mjs</code> script	⚠ Stale heuristic, misleading output	Should be updated or retired

Blunt answer: Brett is commercially strong now. Dan has 3 credible `direct_pursue` cards with `send_ready` contacts — materially better than the previous proof showed. The Cairns gap and the Latrobe Valley `named_unverified` backlog are the remaining items before the pump team should fully trust the weekly digest.
