

Rescue Trigger Wiring & Contact Consistency Proof

Atlas Copco Portable Air — Digest Hardening Gates Follow-Up Date: 9 May 2026

1. Rescue Trigger — Now Wired

The automatic rescue trigger is now live in the Monday digest pipeline (`server/emailDigest.ts` , lines 2111–2310). It fires **only** when the initial gate returns HOLD due to contact-related blockers.

Trigger Conditions

The rescue activates when **any** of these blockers are present in the initial gate result:

Blocker Criterion	Meaning
<code>trust_tier_not_send_ready</code>	Best contact has no verified email
<code>card_detail_inconsistent</code>	Contact source/company data missing
<code>no_contact</code>	Project has zero contacts

Execution Flow

```
HOLD detected with contact blockers
→ Check Apollo daily usage (SELECT SUM from apolloCreditLog WHERE today)
→ Build rescue candidate list from top-5 visible projects
→ Call identifyRescueCandidates(candidates, dailyUsed, 200)
→ If triggered:
  → enrichProjectContacts() for each candidate (max 3)
  → Re-fetch allContacts from DB
  → Re-annotate projects with fresh contacts
  → Re-build gate top-3 with fresh bestContact data
  → Re-run runAllGates()
  → Store result with rescueAttempted=true, rescueResult=JSON
  → If SEND: update annotatedProjects in-place, proceed to email
  → If still HOLD: log and skip
→ If not triggered (budget/cooldown): store HOLD with rescueAttempted=true
```

Guardrails (All Respected)

Guard	Value	Enforcement
Cooldown	7 days	<code>lastEnrichedAt</code> checked from <code>projectEnrichmentCache</code>
Budget cap	200 credits/day	Conservative rescue-specific cap (main pipeline uses 500)
Reserve	5 credits	<code>budgetRemaining = cap - used - 5</code>
Max per run	3 projects	<code>candidates.slice(0, 3)</code>
Min relevance	40	Projects below 40 relevance score skipped
Visible-top only	Top 5	Only <code>action_ready</code> + High/Medium lane fit considered

Stored Evidence

After rescue, the `repDigestGateResults` row contains:

```
{
  "userId": 1,
  "weekKey": "2026-W19",
  "decision": "SEND",
  "blockers": [],
  "top3Snapshot": [{ "id": 1020027, "name": "Murchison Gold", "score": 100, "contactName": "Matthew O'Hara" }],
  "rescueAttempted": true,
  "rescueResult": {
    "triggered": true,
    "candidates": [{ "projectId": 1050004, "projectName": "Peak Hill Gold", "reason": "no_send_ready_contact" }],
    "budgetRemaining": 145,
    "cooldownBlocked": 0
  },
  "phase": "pre_digest"
}
```

Before/After Rescue Flow (Simulated for Ryan)

Phase	Decision	Blockers	Contact State
Before rescue	HOLD	<code>trust_tier_not_send_ready</code> (Peak Hill, Beckenham)	2 of 5 projects have no contacts
Rescue fires	—	Enriches Peak Hill (no contacts, score=100, never enriched)	Apollo: 3 credits used
After rescue	SEND	None	Fresh contacts from Apollo appear

2. Card/Detail Contact Inconsistency — Resolved

Root Cause

The previous addendum showed different contacts for the same project between two sections because:

1. **Section 1 (gate replay)** used a raw SQL `ORDER BY verificationScore DESC` query — which picks the contact with the highest numeric verification score.
2. **Section 2 (card/detail check)** also used a simplified SQL sort.
3. **The real code** uses `selectProjectContact()` which applies a **multi-factor scoring algorithm** (not just `verificationScore`).

The `scoreContact()` function in `contactSelector.ts` scores contacts on:

Factor	Weight	Description
Role relevance	High	Commercial/procurement/GM titles score highest
Company match	High	Contact at project owner's company gets bonus
Email availability	Medium	Having a verified email adds points
Trust tier	Medium	<code>send_ready > named_unverified > llm_inferred</code>
Buyer role match	Low	Matches rep's preferred buyer roles
Territory fit	Low	Contact in same state as project

This means:

- **Murchison Gold:** `Matthew O'Hara` (General Manager at **Meeka Metals** = project owner) wins over `John Sinagra` (higher `verificationScore=95` but at a different company) and `Win Comia` (lower title relevance).
- **United North:** `Oliver Keene` (General Manager at **Rox Resources** = project owner) wins over `Jonathan Streeter` (higher `verificationScore` but different company).

Consistency Proof

The same `selectProjectContact()` function is called by:

1. **Summary card** — via `classifyBriefReadiness()` in the digest pipeline
2. **Digest email** — same `annotatedProjects[].bestContact` used for email rendering
3. **Detail page** — via the tRPC `project.getById` procedure which calls `selectProjectContact()`

All three surfaces receive the same sorted contact list and apply the same scoring function. There is **no separate query or sort** for any of these surfaces.

Live Monday-Visible Proof (All 5 Reps)

Rep	Project	Selected Contact	Title	Email	Trust	Consistent?
Ryan	Murchison Gold	Matthew O'Hara	General Manager	mohara@meekametals.com.au	send_ready	PASS
Ryan	United North	Oliver Keene	General Manager / Mining Manager	oliver.keene@roxresources.com.au	send_ready	PASS
Ryan	Mulgine Trench	Christiaan Dekker	Manager - Mining Planning	(none)	named_unverified	PASS
Brett	Kwinana Gas Power	Johan Myburgh	General Manager Construction	jmyburgh@agl.com.au	send_ready	PASS
Brett	Regional Road Upgrade	Trevor Hopps	Operations Centre Systems Manager	trevor.hopps@nt.gov.au	send_ready	PASS
Brett	Large-Scale Iron Ore	Lucas Chaffin	Mining Manager	(none)	named_unverified	PASS
Daniel	Suburban Rail Loop East	Andrew Vangelista	Senior Project Manager	andrew.vangelista@suburbanrailloopauthority.com.au	send_ready	PASS
Daniel	Sydney Metro West	Col Short	Systems Engineering Manager	col.short@gamuda.com.au	send_ready	PASS
Daniel	Snowy 2.0	Paul Roberts	Construction Manager	p.roberts@futuregenerationjv.com.au	send_ready	PASS
Dan Day	NW QLD Copper	Terrance Lau	Project Manager	(none)	named_unverified	PASS
Dan Day	Bruce Highway	Rick McConnon	Manager Business - Procurement	rick.mcconnon@qld...	send_ready	PASS
Amit	Liddell BESS	Mark O'Sullivan	Project Manager	mark.osullivan@agl.com.au	named_unverified	PASS
Amit	NT Solar & Battery	Mark Moini	Project Director	mark.pengpmp@ghd.com.au	send_ready	PASS
Amit	Burroway Solar & BESS	Colin Noy	Senior Construction Manager	colin.noy@edifyenergy.com	send_ready	PASS

Result: 14/14 PASS — the same contact appears on summary card, digest email, and detail page for every Monday-visible project.

3. Tests

Seven unit tests validate the rescue trigger guardrails:

- ✓ triggers `rescue when` projects have no `send_ready` contacts `and` budget is available
- ✓ does `not` trigger `rescue when` budget is exhausted
- ✓ respects `cooldown`: skips projects enriched within `7` days
- ✓ limits `rescue` to `MAX_RESCUE_PER_RUN` (`3`) projects
- ✓ skips projects below `MIN_RELEVANCE` (`40`)
- ✓ skips projects that already have `send_ready` contacts
- ✓ returns correct budget remaining calculation

All 7 pass in 5ms.

Summary of Changes

File	Change
<code>server/emailDigest.ts</code>	Added rescue trigger block (lines 2111–2310); fixed <code>bestContact</code> to include <code>trustTier</code> , <code>source</code> , <code>company</code> , <code>verificationScore</code>
<code>server/rescueTrigger.test.ts</code>	New: 7 unit tests for rescue guardrails
<code>scripts/liveContactProof.mjs</code>	New: live proof script calling real <code>selectProjectContact()</code> for all 5 reps
