

# Digest Email Audit Report

---

**Generated:** 2026-05-11 | **Week:** 2026-05-08 | **Reps audited:** Ryan Pemberton, Brett Hansen, Daniel Zec, Dan Day, Amit Bhargava

---

## Is the Admin Preview Trustworthy?

---

**No. The admin preview is not a true representation of the outgoing email.**

The admin preview panel renders the internal markdown `content` string inside a `<pre>` monospace block. The actual outgoing email is built by `buildDigestEmailHtml()` in `server/emailTemplate.ts` — a completely separate, purpose-built HTML template with styled cards, badge pills, CTA links, and a dark navy header. The two paths share the same underlying project data but produce visually and structurally different outputs.

| Dimension            | Admin Preview                                      | Real Outgoing Email                                      |
|----------------------|----------------------------------------------------|----------------------------------------------------------|
| Format               | Raw markdown in <code>&lt;pre&gt;</code> monospace | Styled HTML (inline CSS, card layout)                    |
| Header               | None                                               | Dark navy “ATLAS COPCO” header with territory + date     |
| Greeting             | Full name (“Hi Ryan Pemberton”)                    | First name only (“Hi Ryan”)                              |
| Pipeline stats       | Shown (“39 hot   174 new   3 ready to act”)        | Not shown                                                |
| Priority labels      | Emoji + text (“🔴 Must Act This Week”)              | Styled badge pills (“ACTION READY” / “DISCOVERY NEEDED”) |
| Contact details      | Full name + email shown inline                     | Contact title only in CTA (name not shown)               |
| Project metadata     | Location, status, fit score, product type shown    | Pitch text + product tag pill only                       |
| Closing Soon section | Shown if applicable                                | Not present                                              |
| Dashboard link       | Inline markdown link                               | Prominent CTA button                                     |
| Plain-text version   | Same as preview                                    | Separate <code>buildDigestEmailText()</code> output      |

**The admin preview is richer in metadata but is not what recipients receive.** It shows contact emails, location, status, fit scores, and pipeline counts that do not appear in the outgoing email. Conversely, the outgoing email has a structured card layout and styled hierarchy that the preview cannot convey.

There is also a **second divergence in the send path**: the “Send Now For User” button (`sendWeeklyDigestToUser`) passes only `markdownContent` to `sendEmail()` — it does not pass `htmlContent`. This means if a rep’s email is sent via the manual catch-up button rather than the scheduled Monday batch, the recipient receives the markdown-converted fallback HTML (`markdownToHtml()`), not the `buildDigestEmailHtml()`

template. The scheduled batch (`sendWeeklyDigests`) correctly passes both `htmlContent` and `textContent`.

---

## Is the Real Outgoing Email Messy?

---

**Partially.** The structural layout is clean and professional. There are three specific defects that affect readability and credibility.

### Defect 1 — Raw Product Slugs in Tag Pills (All Reps)

The product tag pill at the bottom of each card renders the raw internal slug directly. Recipients see:

- `portable_air` for oil gas
- `multi_lane_pt` for mining
- `bess` for energy
- `OPEXMonitor` for infrastructure

These are internal database identifiers, not product names. A recipient reading `multi_lane_pt` has no idea what that means. `bess` should be `BESS`. `OPEXMonitor` is a concatenated slug that lost its slash. This is a credibility issue — it makes the email look like a system dump rather than a curated brief.

**Root cause:** `buildEmailSignals()` in `emailDigest.ts` (lines 1233, 1282) passes `p.productLane` directly as the `productTag` string with only `replace(/_/g, " ")` applied to the sector name. There is no slug-to-label mapping for the product lane itself.

### Defect 2 — Mid-Word Pitch Truncation (Ryan, Dan Day, Amit)

The pitch for each project is hard-truncated at 200 characters (`substring(0, 197) + "..."`). When the 197th character falls inside a word, the result is visible to recipients:

- Ryan — Murchison Gold: "...potential for new equipment for u..."
- Amit — Alinta Energy: "...This project will be a significan..."

- Amit — Koolunga BESS: "This project..." (truncated at 12 chars into a sentence)
- Dan Day — Cairns: "Contractors are all..." (mid-sentence)

The truncation logic does not snap to the nearest word boundary. This is a minor but noticeable quality issue.

**Root cause:** `pitch.substring(0, 197) + "..."` in `buildEmailSignals()` — no word-boundary check.

## Defect 3 — LinkedIn Headline Used as Job Title in CTA (Amit Bhargava)

For Ubayed Shaqer on the Blind Creek Solar project, the stored contact title is the full LinkedIn headline:

```
Senior Project Manager | Project Development | Engineering Management |  
Utilities | Renewable Energy | Infrastructure | Data Centers
```

This is passed verbatim into the CTA: "Contact the Senior Project Manager | Project Development | Engineering Management | Utilities | Renewable Energy | Infrastructure | Data Centers to discuss rental terms and availability."

In the rendered email, this wraps across two lines inside the card and looks unprofessional. This is a data quality issue in the contacts table, not a template issue, but the template has no guard against it.

---

## Per-Rep Digest Outputs

### Ryan Pemberton

**Subject:** PT Capital Sales — Weekly Intelligence Brief | WA/OFFSHORE\_AU — 2026-05-08

**Top 3 projects in email:**

| # | Project                                                    | Company                  | Product Tag              | CTA                                    |
|---|------------------------------------------------------------|--------------------------|--------------------------|----------------------------------------|
| 1 | Walyering West-1 Gas Development                           | Strike Energy (operator) | portable_air for oil gas | Contact the Construction Site Manager  |
| 2 | Norseman Gold Project - Third Underground Mine Development | Pantoro Gold             | multi_lane_pt for mining | Contact the Maintenance Manager        |
| 3 | Murchison Gold Project underground development             | Meeka Metals             | Direct CAPEX for mining  | Contact the Procurement Superintendent |

**Discovery-needed (not actioned):** Desert Star Project (Bayan Mining), Scarborough Gas Project (Woodside/BHP)

**Note:** Admin preview shows the same top-3 projects but additionally shows contact names (Diego Linares, Troy Morris, John Sinagra) and their emails. The real email CTA omits names — it says “Contact the Construction Site Manager” not “Contact Diego Linares”. The pitch for Murchison Gold truncates mid-word: "...potential for new equipment for u...".

---

**Brett Hansen**

**Subject:** PT Capital Sales – Weekly Intelligence Brief | WA/NT/OFFSHORE\_AU – 2026-05-08

**Top 3 projects in email:**

| # | Project                                                    | Company                  | Product Tag              | CTA                                                |
|---|------------------------------------------------------------|--------------------------|--------------------------|----------------------------------------------------|
| 1 | Kwinana Gas Power Generation 2 Project                     | AGL                      | pumps for energy         | Contact the General Manager Procurement & Property |
| 2 | Walyering West-1 Gas Development                           | Strike Energy (operator) | portable_air for oil gas | Contact the Construction Site Manager              |
| 3 | Norseman Gold Project - Third Underground Mine Development | Pantoro Gold             | multi_lane_pt for mining | Contact the Maintenance Manager                    |

**Discovery-needed:** Desert Star Project (Bayan Mining), Scarborough Gas Project (Woodside/BHP)

**Note:** Brett's territory is WA/NT/OFFSHORE\_AU — wider than Ryan's WA/OFFSHORE\_AU — so Kwinana (Perth, WA) appears for Brett but not Ryan. No truncation issues. No contact name in CTA (admin preview shows Paul Holland, Diego Linares, Troy Morris with emails).

---

## Daniel Zec

**Subject:** PT Capital Sales — Weekly Intelligence Brief |  
NSW/VIC/SA/TAS/OFFSHORE\_AU — 2026-05-08

**Top 3 projects in email:**

| # | Project                                                          | Company                                                    | Product Tag              | CTA                                                                          |
|---|------------------------------------------------------------------|------------------------------------------------------------|--------------------------|------------------------------------------------------------------------------|
| 1 | Bass Strait Decommissioning Infrastructure Upgrade (Barry Beach) | Unknown (related to Bass Strait operators like ExxonMobil) | Fleet CAPEX for oil gas  | Contact the General Manager - Mining Services                                |
| 2 | Olympic Dam Expansion — BHP                                      | BHP Olympic Dam                                            | Direct CAPEX for mining  | Contact the Head of Projects Commercial, Major Projects and New Developments |
| 3 | Snowy 2.0 Hydroelectric Project                                  | Snowy Hydro                                                | multi_lane_pt for energy | Contact the Deputy Construction Manager                                      |

**Discovery-needed:** North East Link Program (VIC), Suburban Rail Loop — East Section (VIC)

**Note:** “Fleet CAPEX” and “Direct CAPEX” are human-readable opportunity routes — they render acceptably. The Olympic Dam CTA is long but wraps cleanly. Admin preview shows the same 3 projects with contact names (Sam Leszczynski, Olga Machrone, Giuseppe Gulisano) and emails.

---

## Dan Day

**Subject:** PT Capital Sales — Weekly Intelligence Brief | SA/QLD/VIC/NSW/TAS — 2026-05-08

**Top 3 projects in email:**

| # | Project                                                          | Company                                                    | Product Tag                      | CTA                                                 |
|---|------------------------------------------------------------------|------------------------------------------------------------|----------------------------------|-----------------------------------------------------|
| 1 | Bass Strait Decommissioning Infrastructure Upgrade (Barry Beach) | Unknown (related to Bass Strait operators like ExxonMobil) | Fleet CAPEX for oil gas          | Contact the General Manager - Mining Services       |
| 2 | Bruce Highway Safety Upgrades Program                            | Queensland Government (implied)                            | multi_lane_pt for infrastructure | Contact the Manager (Procurement Analysis) at QDTMR |
| 3 | Bruce Highway Targeted Safety Program (BHTSP)                    | Federal and Queensland governments                         | pumps for infrastructure         | Contact the Construction Manager                    |

**Discovery-needed:** Cairns Drinking Water Supply Upgrades (OPEX/Monitor), Cross River Rail (Direct CAPEX)

**Note:** The Cairns project tag renders as `OPEXMonitor for infrastructure` — the slash in `OPEX/Monitor` is stripped. The Cairns pitch truncates mid-sentence: `"Contractors are all..."`. Admin preview shows the same 3 projects with contact names (Sam Leszczynski, Abe Ninan, Mark Nicholl) and emails.

---

## Amit Bhargava

**Subject:** PT Capital Sales – Weekly Intelligence Brief |  
WA/NSW/QLD/VIC/SA/TAS/NT/ACT/OFFSHORE\_AU – 2026-05-08

**Top 3 projects in email:**

| # | Project                                                  | Company           | Product Tag              | CTA                                                                                                                                              |
|---|----------------------------------------------------------|-------------------|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Bellambi Heights Battery Energy Storage System - Stage 2 | Vena Energy       | bess for energy          | Contact the Engineering Manager, Offshore Wind                                                                                                   |
| 2 | Blind Creek Solar and Battery Project                    | Octopus Australia | multi_lane_pt for energy | Contact the Senior Project Manager   Project Development   Engineering Management   Utilities   Renewable Energy   Infrastructure   Data Centers |
| 3 | Koolunga BESS (Battery Energy Storage System)            | Equis             | Direct CAPEX for energy  | Contact the General Manager BESS & Solar Development                                                                                             |

**Discovery-needed:** Alinta Energy 500 MW / 2,000 MWh BESS (Stage 1), Koolunga Battery Energy Storage System (BESS)

**Note:** This rep's email has the most visible issues. `bess` is a raw lowercase slug. The Blind Creek CTA uses Ubayed Shaqer's full LinkedIn headline as the job title — it wraps across two lines in the card. The Alinta pitch truncates mid-word: "...This project will be a significan...". Admin preview shows the same 3 projects with contact names (Choi JungIn, Ubayed Shaqer, Vincenzo Gennaro) and emails.

---

## Summary of Defects

| Defect                                                                                                                                            | Severity                                                | Reps Affected         | Root Cause                                                                                      |
|---------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------|-----------------------|-------------------------------------------------------------------------------------------------|
| Raw product slugs in tag pills<br>( <code>portable_air</code> ,<br><code>multi_lane_pt</code> , <code>bess</code> ,<br><code>OPEXMonitor</code> ) | Medium — looks like a system dump                       | All 5                 | No slug-to-label map in <code>buildEmailSignals()</code>                                        |
| Mid-word pitch truncation<br>( <code>"for u..."</code> ,<br><code>"significan..."</code> )                                                        | Low-Medium — unprofessional                             | Ryan, Dan Day, Amit   | <code>substring(0, 197)</code> with no word-boundary snap                                       |
| LinkedIn headline used as job title in CTA                                                                                                        | Medium — wraps badly, reads oddly                       | Amit (Ubayeda Shaqer) | No title length guard in <code>buildEmailSignals()</code>                                       |
| <code>sendWeeklyDigestToUser</code> (manual send) omits <code>htmlContent</code>                                                                  | High — sends markdown fallback, not the styled template | Any rep sent manually | Missing <code>htmlContent</code> param at line 2853 in <code>emailDigest.ts</code>              |
| Admin preview does not reflect real email                                                                                                         | Informational — misleading for QA                       | Admin user            | Different render path: <code>&lt;pre&gt;</code> markdown vs <code>buildDigestEmailHtml()</code> |
